1. Purpose

This policy outlines a standardized framework for the request, evaluation, approval, and management of all new tools. The objective is to ensure that all procured solutions are secure, financially sound, and aligned with the company's strategic goals, while providing a clear and efficient process for all stakeholders.

2. Scope

This policy applies to all employees, departments, and function heads involved in the process of requesting, evaluating, approving, and implementing new tools within PetroApp.

3. Policy Statement

All requests for new tools must adhere to the multi-gate approval process detailed in this document. This process is designed to ensure that every new tool undergoes a thorough evaluation for its business value, technical feasibility, security compliance, and financial impact before any contractual commitments are made.

The acquisition of a new tool will proceed through the following sequential gates:

3.1 Request Initiation

1. The Function Head initiates a "Tool Request Ticket" in Jira Service Desk.
2. The ticket must detail the problem, anticipated benefits, budget, and desired timeline.
3. The request is formally submitted to the CTO.

3.2 Quick Feasibility (SLA: 48 Hours)

1. The CTO conducts a rapid validation with the Technology team.
2. They confirm the technical feasibility and ensure no existing in-house solution already meets the need.

3.3 Requirements Workshop & Definition

1. The CTO facilitates a workshop with representatives from Technology, Finance, Security, and the requesting department.
2. The outcome of the workshop is a Detailed Requirements Document and a RACI matrix defining project roles.

3.4 Market Short-List

1. The CTO identifies and obtains offers from potential vendors.
2. A shortlist of up to three vendors is created based on an evaluation of Functionality, Security, Cost, and User Experience.

3.5 Proof of Concept (PoC) (Duration: 1–4 Weeks)

1. Proof of Concept is conducted with one or more shortlisted vendors by the CTO.
2. The PoC is measured against clearly defined success metrics that are established beforehand.

3.6 Security & Legal Review

3. The CTO ensures a mandatory review using a comprehensive 80-point questionnaire aligned with ISO 27001 standards to grant security approval.
4. The CTO ensures that the vendor's terms, privacy policies, and contracts are reviewed and approved legally according to the country laws.

3.7 Total Cost of Ownership (TCO) & Return on Investment (ROI) Calculation

1. The Finance team performs a thorough financial analysis.
2. This includes calculating the TCO and ROI over a 3-year period, covering all hidden costs and potential exit fees.

3.8 Final Approval Committee

1. The complete proposal (business case, all approvals, financial analysis) is presented for final sign-off.
2. Approvals:
    - Within Budget: Requires approval from the **Department Head, CTO, and CEO, plus Legal.**
    - Outside Budget: Requires approval from the **Department Head, CTO, CFO, and CEO, plus Legal.**
3. Once approved, the formal Procurement process begins.

3.9 Post-Procurement Activities

1. Onboarding and Handover:
    - The CTO, along with the vendor and requesting department, will manage the tool's implementation, required integration, training sessions, process changes with the Governance team and handover for production.
2. Quarterly Usage Review:
    - The CTO and the tool's business owner will conduct a quarterly review to ensure the solution delivers its expected value.
    - This review will assess usage metrics to determine if license adjustments or renegotiations are necessary.
